

Amendments to the Claims:

Listing of Claims - The following listing of claims is to replace all previous listing of claims.

1. (Currently Amended) A method of utilizing a push model to provide access to a message list in
2 one or more of a voice, a fax, an e-mail and a unified mailbox through a wireless network, the
3 method comprising the steps of:
 4. a. determining if an updated mailbox content list is to be transmitted by a server to
5 a wireless device, wherein the server independently determines if and when to
6 transmit the updated mailbox content list, further wherein the updated mailbox
7 content list comprises a list of stored messages with multiple different message
8 formats;
 9. b. forming a first communication link through a wireless network between the
10 server and the wireless device;
 11. c. transmitting the updated mailbox content list from the server to the wireless
12 device over the first communication link;
 13. d. automatically receiving the updated mailbox content list by the wireless device
14 from the server through the first communication link;
 15. e. disconnecting the first communication link after the wireless device receives the
16 updated mailbox content list;
 17. f. scrolling through the updated mailbox content list and selecting a message
18 therefrom with the wireless device;
 19. g. forming a second communication link through the wireless network thereby
20 linking the wireless device and the server;
 21. h. selectively receiving the message on the wireless device from the server over
22 the second communication link; [[and]]
 23. i. providing the message to a user of the wireless device; and
 24. j. transmitting a new updated mailbox content list to the wireless device after a
user accesses the message list using means other than the wireless device.

17 wireless device after a user accesses the message list using means other than the
18 wireless device.

1 8. (Original) The system of Claim 7 wherein the wireless network has a low data bandwidth
2 and a high data latency.

1 9. (Previously Presented)The system of Claim 7 wherein the updated mailbox content list
2 includes a new message notification.

1 10. (Previously Presented)The system of Claim 9 wherein after being sent by the server, the new
2 message notification and the updated content list can be viewed by a user with the wireless
3 device.

1 11. (Previously Presented)The system of Claim 10 wherein the user may scroll through the
2 updated mailbox content list with the wireless device.

1 12. (Previously Presented)The system of Claim 7 wherein a user selects the message by issuing a
2 command to the server.

1 13. (Previously Presented)The system of Claim 12 wherein the server delivers the message
2 selected by the user and the message is played for the user by the wireless device.

1 14. (Currently Amended) A method of providing access to a message list in one or more of a
2 voice, a fax, an e-mail or a unified mailbox through a wireless network, the method comprising
3 the steps of:
4 a. determining if a new message notification and an updated mailbox content list are to be
5 transmitted by a server to a wireless device, wherein the server independently
6 determines if and when to transmit the new message notification and the updated
7 mailbox content list, further wherein the updated mailbox content list comprises a list of
8 stored messages with multiple different message formats;
9 b. forming a first communication link through a wireless network between the server and
10 the wireless device;

- 11 c. transmitting the new message notification and the updated mailbox content list from the
12 server to the wireless device over the first communication link;
13 d. automatically receiving through the wireless network the new message notification and
14 the updated mailbox content list from the server;
15 e. disconnecting the first communication link after the wireless device receives the new
16 message notification and the updated mailbox content list;
17 f. remotely scrolling through the updated mailbox content list and selecting a message
18 therefrom using the wireless device;
19 g. forming a second communication link between the wireless device and the server;
20 [[and]]
21 h. receiving the message on the wireless device from the server over the second
22 communication link and presenting the message; and
23 i. transmitting a new updated mailbox content list to the wireless device after a user
24 accesses the message list using means other than the wireless device.

1 15. (Canceled)

1 16. (Original) The method of Claim 14 further comprising the step of a user scrolling through
2 the updated mailbox content list without accessing the data network.

1 17. (Previously Presented) The method of Claim 14 further comprising the step of a user issuing a
2 command using the wireless device.

1 18. (Original) The method of Claim 14 further comprising the step of the server playing the
2 message according to a command given by the user.

1 19. (Currently Amended) A system for providing access to a message list in one or more of a
2 voice, a fax or a unified mailbox through a wireless network, the system comprising:
3 a. means for determining if an updated mailbox content list is to be transmitted by a server
4 to a wireless device, wherein the server independently determines if and when to
5 transmit the updated mailbox content list, further wherein the updated mailbox content
6 list comprises a list of stored messages with multiple different message formats;

- 7 b. means for forming a first communication link through a wireless network between the
8 server and the wireless device;
- 9 c. means for transmitting the updated mailbox content list from the server to the wireless
10 device over the first communication link;
- 11 d. means for automatically receiving the updated mailbox content list by the wireless
12 device from the server through the first communication link;
- 13 e. means for disconnecting the first communication link after the wireless device receives
14 the updated mailbox content list;
- 15 f. means for scrolling through the updated mailbox content list and selecting a message
16 therefrom with the wireless device;
- 17 g. means for forming a second communication link through the wireless network thereby
18 linking the wireless device and the server;
- 19 h. means for selectively receiving the message on the wireless device from the server over
20 the second communication link; [[and]]
- 21 i. means for providing the message to a user of the wireless device; and
- 22 j. means for transmitting a new updated mailbox content list to the wireless device after a
23 user accesses the message list using means other than the wireless device.

1 20. (Original) The system of Claim 19 wherein a new message notification includes the
2 updated mailbox content list.

1 21. (Original) The system of Claim 19 wherein the wireless network has a low bandwidth and
2 a high latency.

1 22. (Original) The system of Claim 19 wherein the user scrolls through the updated mailbox
2 content list without accessing the wireless network.

1 23. (Original) The system of Claim 19 wherein the user issues a command using the wireless
2 device.

1 24. (Previously Presented) The system of Claim 19 wherein the server plays the message
2 according to a command given by the user.
